Editors for Volume 12

David E. Boufford
Taxon Editor for Cervantesiaceae,
Comandraceae, Santalaceae,
Schoepfiaceae, Thesiaceae,
Viscaceae, and Ximeniaceae, and
Co-Taxon Editor for Celastraceae

Cassandra L. Howard
Assisting Technical Editor

Robert W. Kiger
Bibliographic Editor and Taxon
Editor for Elatinaceae

Geoffrey A. Levin
Co-Lead Editor, Taxon Editor
for Cornaceae, Eucommiaceae,
Garryaceae, Loasaceae,
Malpighiaceae, Nyssaceae,
Simmondsiaceae, and
Zygophyllaceae, and Co-Taxon
Editor for Euphorbiaceae

Jackie M. Poole
Taxon Editor for Krameriaceae

Andrew C. Pryor
Technical Editor

Richard K. Rabeler
Taxon Editor for Hydrangeaceae

Heidi H. Schmidt
Managing Editor

John L. Strother
Reviewing Editor

Debra K. Trock
Taxon Editor for Rhamnaceae

Gordon C. Tucker
Taxon Editor for Oxalidaceae

Grady L. Webster†
Preliminary Taxon Editor for
Euphorbiaceae, Phyllanthaceae,
Picrodendraceae, and
Putranjivaceae

Elizabeth F. Wells
Co-Taxon Editor for Celastraceae

James L. Zarucchi
Editorial Director

Volume 12 Composition

Kristin Pierce
Compositor and Editorial Assistant

Heidi H. Schmidt
Production Coordinator and
Managing Editor
Oxford University Press is a department of the University of Oxford. It furthers the University’s objective of excellence in research, scholarship, and education by publishing worldwide.

Oxford New York
Auckland Cape Town Dar es Salaam Hong Kong Karachi Kuala Lumpur
Madrid Melbourne Mexico City Nairobi New Delhi Shanghai Taipei Toronto

With offices in
Argentina Austria Brazil Chile Czech Republic France Greece Guatemala Hungary Italy
Japan Poland Portugal Singapore South Korea Switzerland Thailand Turkey Ukraine Vietnam

Library of Congress Cataloging-in-Publication Data
(Revised for Volume 12)
Flora of North America North of Mexico
edited by Flora of North America Editorial Committee.
Includes bibliographical references and indexes.
Contents: v. 1. Introduction—v. 2. Pteridophytes and gymnosperms—
v. 3. Magnoliophyta: Magnoliidae and Hamamelidae—
v. 22. Magnoliophyta: Alismatidae, Arecidae, Commelinidae (in part), and Zingiberidae—
v. 26. Magnoliophyta: Liliales and Orchidales—
v. 23. Magnoliophyta:  Commelinidae (in part): Cyperaceae—
v. 25. Magnoliophyta:  Commelinidae (in part): Poaceae, part 2—
v. 4. Magnoliophyta: Caryophyllidae (in part): part 1—
v. 5. Magnoliophyta: Caryophyllidae (in part): part 2—
v. 24. Magnoliophyta: Commelinidae (in part): Poaceae, part 1—
v. 27. Bryophyta, part 1—
v. 8. Magnoliophyta: Paoniaeae to Ericaceae—
v. 7. Magnoliophyta: Salicaeae to Brassicaceae—
v. 28. Bryophyta, part 2—
v. 9. Magnoliophyta: Picramniaceae to Rosaceae—
v. 6. Magnoliophyta: Cucurbitaceae to Drosanaceae—
v. 12. Magnoliophyta: Vitaceae to Garryaceae

ISBN: 978-0-19-064372-0 (v. 12)

For sponsorship of illustrations included in this volume, we express sincere appreciation to:

Erick M. Adams, Olympia, Washington  
*Cornus canadensis*, Cornaceae

Mac Alford, Hattiesburg, Mississippi  
*Berchemia scandens*, Rhamnaceae – in honor of E. Earl Alford and M. Pauline Alford

Arizona Native Plant Society  
*Jamesia americana*, Hydrangeaceae

Richard Carter, Valdosta, Georgia  
*Licania michauxii*, Chrysobalanaceae – in memory of Wayne Reynolds Faircloth  
*Cornus florida*, Cornaceae – in memory of Jim Ella Wells Aden  
*Stillingia sylvatica*, Euphorbiaceae – in memory of Oneita Wells Keith  
*Hydrangea quercifolia*, Hydrangeaceae – in memory of Bessie May Wells

Christopher Davidson and Sharon Christoph, Botanical Research Foundation of Idaho, Boise  
*Mortonia scabrella*, Celastraceae  
*Parnassia palustris*, Celastraceae  
*Paxistima canbyi*, Celastraceae  
*Pyrularia pubera*, Cervantesiaceae  
*Cornus sericea*, Cornaceae  
*Comandra umbellata*, Comandraceae  
*Eucnide urens*, Loasaceae  
*Petalonyx nitidus*, Loasaceae  
*Simmondsia chinensis*, Simmondsiaceae  
*Buckleya distichophylla*, Thesiaceae

David Giblin, Seattle, Washington  
*Linum lewisii*, Linaceae

Huntington Botanical Garden, San Marino, California  
*Euphorbia*, Euphorbiaceae  
Volume 12 Frontispiece, *Euphorbia marginata*, Euphorbiaceae

Geoffrey A. Levin, Champaign, Illinois  
*Acalypha californica*, Euphorbiaceae  
*Acalypha ostryifolia*, Euphorbiaceae  
*Acalypha rhomboidea*, Euphorbiaceae  
*Phyllanthus abnormis*, Phyllanthaceae  
*Phyllanthus carolinensis*, Phyllanthaceae  
*Phyllanthus polygonoides*, Phyllanthaceae

Naples Botanical Garden, Naples, Florida  
*Hippocratea volubilis*, Celastraceae  
*Naples Botanical Garden, Naples, Florida*  
*Mentzelia laevicaulis*, Loasaceae

Smithsonian Institution, National Museum of Natural History, Botany Department  
*Vitaceae*

University of Michigan Herbarium, Ann Arbor  
*Malpighiaceae*

Christopher Woods, Benicia, California  
*Carpenteria californica*, Hydrangeaceae

Preface for Volume 12

Since the publication of Flora of North America Volume 6 (the nineteenth volume in the Flora series) in mid 2015, the membership of the Flora of North America Association [FNAA] Board of Directors has undergone changes. Ronald L. Hartman, Timothy K. Lowrey, Robert F. C. Naczi, Leila M. Shultz, and Debra K. Trock have retired from the board. New board members include Michael J. Huft, Alexander Krings, Mare Nazaire, and George Yatskievych (Taxon Editors). As a result of a reorganization finalized in 2003, the FNAA Board of Directors succeeded the former Editorial Committee; for the sake of continuity of citation, authorship of Flora volumes is still to be cited as “Flora of North America Editorial Committee, eds.”

Most of the editorial process for this volume was done at the University of Illinois in Champaign, Illinois, the Canadian Museum of Nature in Ottawa, Ontario, and Missouri Botanical Garden in St. Louis. Final processing and composition took place at the Missouri Botanical Garden; this included pre-press processing, typesetting and layout, plus coordination for all aspects of planning, executing, and scanning the illustrations. Other aspects of production, such as art panel composition plus labeling and occurrence map generation, were carried out in Gaston, Oregon, and Miami, Florida, respectively.

Line drawings published in this volume were executed by seven very talented artists: Barbara Alongi prepared illustrations for Celastraceae, Elatinaceae, Euphorbiaceae in greater part (excluding Adelia & Ricinus) including the frontispiece depicting Euphorbia marginata, Phyllanthaceae, Picodendraceae, Putranjivaceae, Simmondsiaceae, and Zygophyllaceae; Karin Douthit illustrated Malpighiaceae; Linny Heagy illustrated taxa of Krameraceae and Loasaceae; Marjorie C. Leggitt illustrated Chrysobalanaceae; John Myers illustrated Philadelphus (Hydrangeaceae), Linaceae, and Rhizophoraceae; Alice Tangerini illustrated Vitaceae; and Yevonn Wilson-Ramsey prepared illustrations for Cervantesiaceae, Comandraceae, Cornaceae, Eucommiaceae, Adelia and Ricinus (Euphorbiaceae), Garryaceae, Hydrangeaceae (excluding Philadelphus), Nyssaceae, Oxalidaceae, Rhamnaceae, Thesiaceae, Viscaceae, and Ximeniaceae. In addition to preparing various illustrations, John Myers composed and labeled all of the line drawings that appear in this volume.

Starting with Volume 8 published in 2009, the circumscription and ordering of some families within the Flora have been modified so they mostly reflect that of the Angiosperm Phylogeny Group [APG] rather than the previously followed Cronquist organizational structure. The groups of families found in this and future volumes in the series are mostly ordered following E. M. Haston et al. (2007); since APG views of relationships and circumscriptions have evolved, and will certainly change further through time, some discrepancies in organization will occur. Volume 30 of the Flora of North America will contain a comprehensive index to the published volumes.

Support from many institutions and by numerous individuals has enabled the Flora to be produced. Members of the Flora of North America Association remain deeply thankful to the many people who continue to help create, encourage, and sustain the Flora.
Scope of the Work

Flora of North America North of Mexico is a synoptic account of the plants of North America north of Mexico: the continental United States of America (including the Florida Keys and Aleutian Islands), Canada, Greenland (Kalâtdlit-Nunât), and St. Pierre and Miquelon. The Flora is intended to serve both as a means of identifying plants within the region and as a systematic conspectus of the North American flora.

The Flora will be published in 30 volumes. Volume 1 contains background information that is useful for understanding patterns in the flora. Volume 2 contains treatments of ferns and gymnosperms. Families in volumes 3–26, the angiosperms, were first arranged according to the classification system of A. Cronquist (1981) with some modifications, and starting with Volume 8, the circumscriptions and ordering of families generally follow those of the Angiosperm Phylogeny Group [APG] (see E. Haston et al. 2007). Bryophytes are being covered in volumes 27–29. Volume 30 will contain the cumulative bibliography and index.

The first two volumes were published in 1993, Volume 3 in 1997, and Volumes 22, 23, and 26, the first three of five volumes covering the monocotyledons, appeared in 2000, 2002, and 2002, respectively. Volume 4, the first part of the Caryophyllales, was published in late 2003. Volume 25, the second part of the Poaceae, was published in mid 2003, and Volume 24, the first part, was published in January 2007. Volume 5, completing the Caryophyllales plus Polygonales and Plumbaginaceae, was published in early 2005. Volumes 19–21, treating Asteraceae, were published in early 2006. Volume 27, the first of two volumes treating mosses in North America, was published in late 2007. Volume 8, Paeoniaceae to Ericaceae, was published in September 2009, and Volume 7, Salicaceae to Brassicaceae, appeared in 2010. In 2014, Volume 28 was published, completing the treatment of mosses for the flora area, and at the end of 2014, Volume 9, Picramniaceae to Rosaceae was published. Volume 6, which covered Cucurbitaceae to Drosoraceae, was published in 2015. The correct bibliographic citation for the Flora is: Flora of North America Editorial Committee, eds. 1993+. Flora of North America North of Mexico. 20+ vols. New York and Oxford.

Volume 12 treats 765 species in 122 genera contained in 29 families. For additional statistics please refer to Table 1 on p. xx.

Contents  ·  General

The Flora includes accepted names, selected synonyms, literature citations, identification keys, descriptions, phenological information, summaries of habitats and geographic ranges, and other biological observations. Each volume contains a bibliography and an index to the taxa included in that volume. The treatments, written and reviewed by experts from throughout the systematic botanical community, are based on original observations of herbarium specimens and, whenever possible, on living plants. These observations are supplemented by critical reviews of the literature.
INTRODUCTION

Basic Concepts

Our goal is to make the *Flora* as clear, concise, and informative as practicable so that it can be an important resource for both botanists and nonbotanists. To this end, we are attempting to be consistent in style and content from the first volume to the last. Readers may assume that a term has the same meaning each time it appears and that, within groups, descriptions may be compared directly with one another. Any departures from consistent usage will be explicitly noted in the treatments (see References).

Treatments are intended to reflect current knowledge of taxa throughout their ranges worldwide, and classifications are therefore based on all available evidence. Where notable differences of opinion about the classification of a group occur, appropriate references are mentioned in the discussion of the group.

*Italic* = introduced
Documentation and arguments supporting significantly revised classifications are published separately in botanical journals before publication of the pertinent volume of the Flora. Similarly, all new names and new combinations are published elsewhere prior to their use in the Flora. No nomenclatural innovations will be published intentionally in the Flora.

Taxa treated in full include extant and recently extinct or extirpated native species, named hybrids that are well established (or frequent), introduced plants that are naturalized, and cultivated plants that are found frequently outside cultivation. Taxa mentioned only in discussions include waifs known only from isolated old records and some non-native, economically important or extensively cultivated plants, particularly when they are relatives of native species. Excluded names and taxa are listed at the ends of appropriate sections, for example, species at the end of genus, genera at the end of family.

Treatments are intended to be succinct and diagnostic but adequately descriptive. Characters and character states used in the keys are repeated in the descriptions. Descriptions of related taxa at the same rank are directly comparable.

With few exceptions, taxa are presented in taxonomic sequence. If an author is unable to produce a classification, the taxa are arranged alphabetically and the reasons are given in the discussion.

Treatments of hybrids follow that of one of the putative parents. Hybrid complexes are treated at the ends of their genera, after the descriptions of species.

We have attempted to keep terminology as simple as accuracy permits. Common English equivalents usually have been used in place of Latin or Latinized terms or other specialized terminology, whenever the correct meaning could be conveyed in approximately the same space, for example, “pitted” rather than “foveolate,” but “striate” rather than “with fine longitudinal lines.” See Categorical Glossary for the Flora of North America Project (R. W. Kiger and D. M. Porter 2001; also available online at http://huntbot.andrew.cmu.edu) for standard definitions of generally used terms. Very specialized terms are defined, and sometimes illustrated, in the relevant family or generic treatments.

References

Graphic Elements

All genera and more than 27 percent of the species in this volume are illustrated. The illustrations may show diagnostic traits or complex structures. Most illustrations have been drawn from herbarium specimens selected by the authors. Data on specimens that were used and parts that were illustrated have been recorded. This information, together with the archivally preserved original drawings, is deposited in the Missouri Botanical Garden Library and is available for scholarly study.

Specific Information in Treatments

Keys

Dichotomous keys are included for all ranks below family if two or more taxa are treated. More than one key may be given to facilitate identification of sterile material or for flowering versus fruiting material.

Nomenclatural Information

Basionyms of accepted names, with author and bibliographic citations, are listed first in synonymy, followed by any other synonyms in common recent use, listed in alphabetical order, without bibliographic citations.

The last names of authors of taxonomic names have been spelled out. The conventions of *Authors of Plant Names* (R. K. Brummitt and C. E. Powell 1992) have been used as a guide for including first initials to discriminate individuals who share surnames.

If only one infraspecific taxon within a species occurs in the flora area, nomenclatural information (literature citation, basionym with literature citation, relevant other synonyms) is given for the species, as is information on the number of infraspecific taxa in the species and their distribution worldwide, if known. A description and detailed distributional information are given only for the infraspecific taxon.

Descriptions

Character states common to all taxa are noted in the description of the taxon at the next higher rank. For example, if sexual condition is dioecious for all species treated within a genus, that character state is given in the generic description. Characters used in keys are repeated in the descriptions. Characteristics are given as they occur in plants from the flora area. Characteristics that occur only in plants from outside the flora area may be given within square brackets, or instead may be noted in the discussion following the description. In families with one genus and one or more species, the family description is given as usual, the genus description is condensed, and the species are described as usual. Any special terms that may be used when describing members of a genus are presented and explained in the genus description or discussion.
In reading descriptions, the reader may assume, unless otherwise noted, that: the plants are green, photosynthetic, and reproductively mature; woody plants are perennial; stems are erect; roots are fibrous; leaves are simple and petiolate; flowers are bisexual, radially symmetric, and pedicelled; perianth parts are hypogynous, distinct, and free; and ovaries are superior. Because measurements and elevations are almost always approximate, modifiers such as “about,” “circa,” or “±” are usually omitted.

Unless otherwise noted, dimensions are length × width. If only one dimension is given, it is length or height. All measurements are given in metric units. Measurements usually are based on dried specimens but these should not differ significantly from the measurements actually found in fresh or living material.

Chromosome numbers generally are given only if published and vouchered counts are available from North American material or from an adjacent region. No new counts are published intentionally in the Flora. Chromosome counts from nonsporophyte tissue have been converted to the $2n$ form. The base number ($x =$) is given for each genus. This represents the lowest known haploid count for the genus unless evidence is available that the base number differs.

Flowering time and often fruiting time are given by season, sometimes qualified by early, mid, or late, or by months. Elevations over 200 m generally are rounded to the nearest 100 m; those 100 m and under are rounded to the nearest 10 m. Mean sea level is shown as 0 m, with the understanding that this is approximate. Elevation often is omitted from herbarium specimen labels, particularly for collections made where the topography is not remarkable, and therefore precise elevation is sometimes not known for a given taxon.

The term “introduced” is defined broadly to refer to plants that were released deliberately or accidentally into the flora and that now are naturalized, that is, exist as wild plants in areas in which they were not recorded as native in the past. The distribution of introduced taxa are often poorly documented and changing, so the distribution statements for those taxa may not be fully accurate.

If a taxon is globally rare or if its continued existence is threatened in some way, the words “of conservation concern” appear before the statements of elevation and geographic range.

Criteria for taxa of conservation concern are based on NatureServe’s (formerly The Nature Conservancy)—see http://www.natureserve.org—designations of global rank (G-rank) G1 and G2:

**G1** Critically imperiled globally because of extreme rarity (5 or fewer occurrences or fewer than 1000 individuals or acres) or because of some factor(s) making it especially vulnerable to extinction.

**G2** Imperiled globally because of rarity (5–20 occurrences or fewer than 3000 individuals or acres) or because of some factor(s) making it very vulnerable to extinction throughout its range.

The occurrence of species and infraspecific taxa within political subunits of the Flora area is depicted by dots placed on the outline map to indicate occurrence in a state or province. The Nunavut boundary on the maps has been provided by the GeoAccess Division, Canada Centre for Remote Sensing, Earth Science. Authors are expected to have seen at least one specimen documenting each geographic unit record (except in rare cases when undoubted literature reports may be used) and have been urged to examine as many specimens as possible from throughout the range of each taxon. Additional information about taxon distribution may be presented in the discussion.
Distributions are stated in the following order: Greenland; St. Pierre and Miquelon; Canada (provinces and territories in alphabetic order); United States (states in alphabetic order); Mexico (11 northern states may be listed specifically, in alphabetic order); West Indies; Bermuda; Central America (Belize, Costa Rica, El Salvador, Guatemala, Honduras, Nicaragua, Panama); South America; Europe, or Eurasia; Asia (including Indonesia); Africa; Atlantic Islands; Indian Ocean Islands; Pacific Islands; Australia; Antarctica.

Discussion

The discussion section may include information on taxonomic problems, distributional and ecological details, interesting biological phenomena, and economic uses.

Selected References

Major references used in preparation of a treatment or containing critical information about a taxon are cited following the discussion. These, and other works that are referred to in discussion or elsewhere, are included in Literature Cited at the end of the volume.

CAUTION

The Flora of North America Editorial Committee does not encourage, recommend, promote, or endorse any of the folk remedies, culinary practices, or various utilizations of any plant described within this volume. Information about medicinal practices and/or ingestion of plants, or of any part or preparation thereof, has been included only for historical background and as a matter of interest. Under no circumstances should the information contained in these volumes be used in connection with medical treatment. Readers are strongly cautioned to remember that many plants in the flora are toxic or can cause unpleasant or adverse reactions if used or encountered carelessly.
